10-19 March British Science Week 2023

Science Week at St. Michael's

This week, we have been celebrating British Science Week 2023. This year's theme is Connections and each class has been carrying out experiments to link their science knowledge to the world around them. Experiments have included bridge building, making simple circuits, investigating air resistance and testing fruit to make fruit batteries and experiments exploring the senses including our sense of smell.

We were really pleased to have welcomed in Class 3 and Class 4 parents into school to participate in the experiments. The children loved sharing their learning with you all.
